

EXAM RESULTS

EBA2910 Mathematics for Business Analytics, 23/05/2022

Statistics

Share A-B	10.0%
Share F	55.0%
Average score	36.2% (F)

Comments

The exam results were pretty bad, even though some students did well (grades A,B and C are good grades in this course). The grade distribution is shown to the right (there is no comparison since this is the first ordinary final exam in this course). The participation in lectures and tutoring sessions have been extremely low this year.

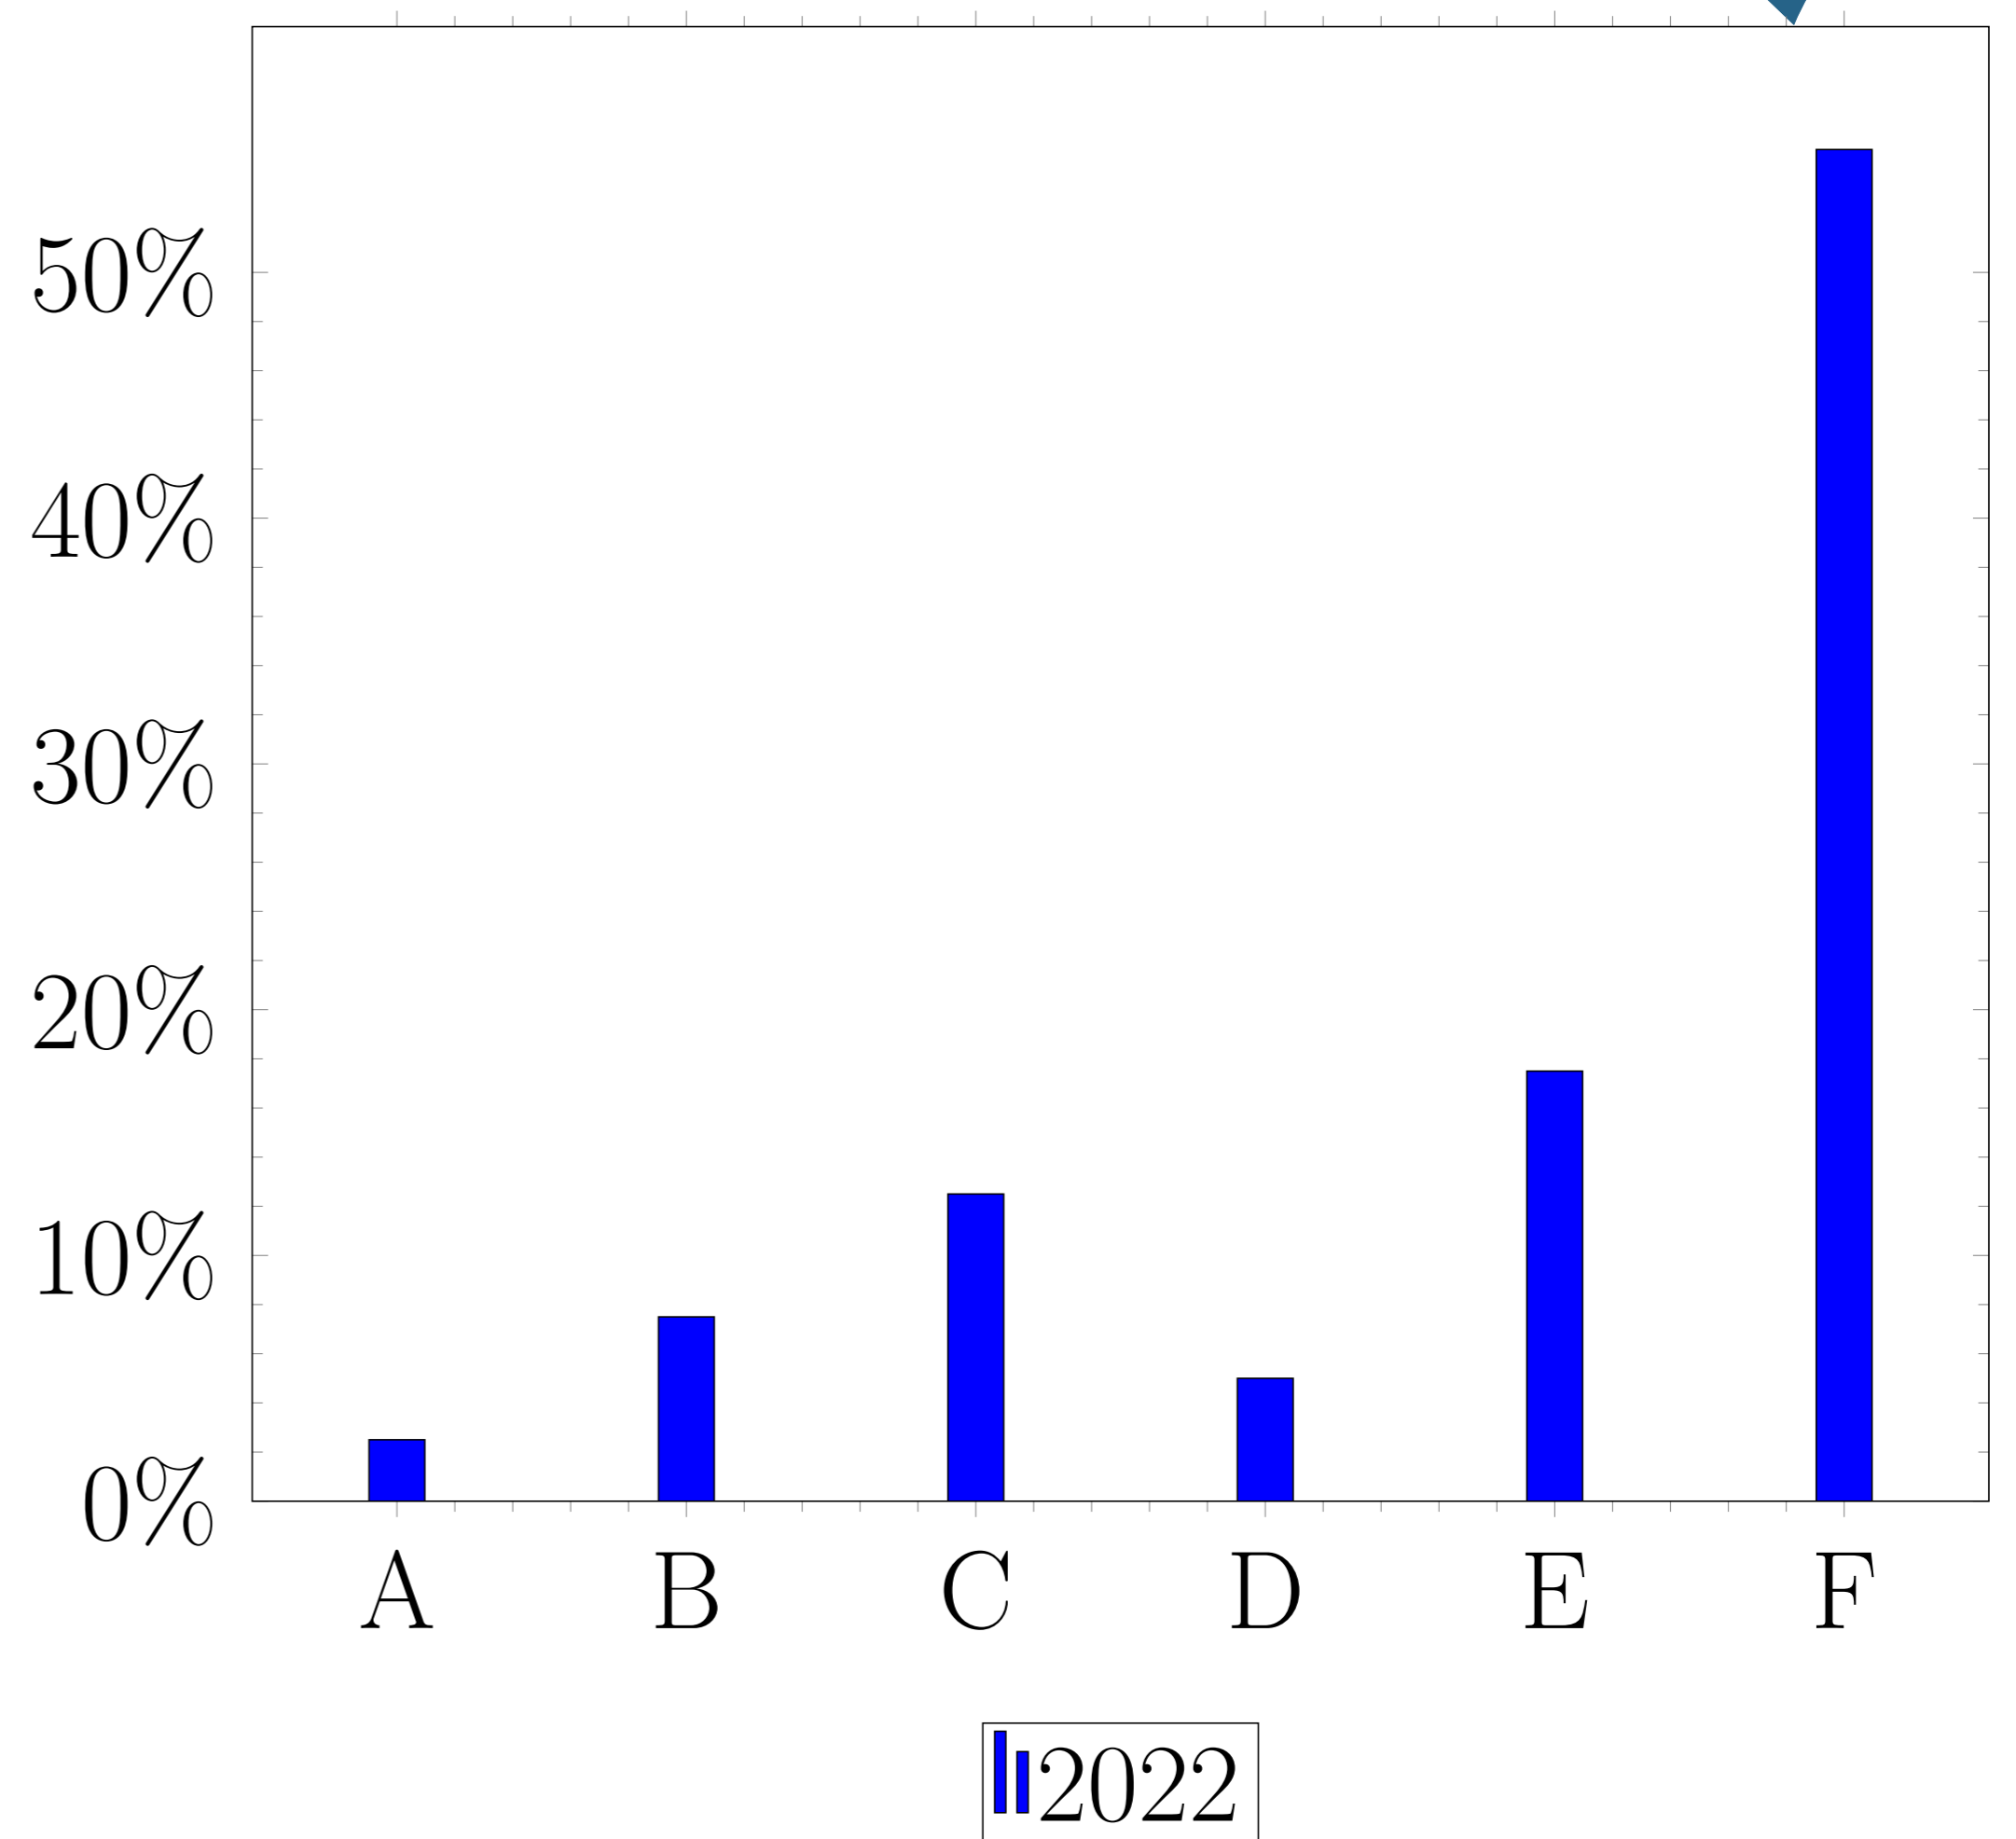

Many of the problems have very low average scores. This is to be expected in the most difficult problems (like 3c and 6b), but is unexpected for many of the other problems (which in many cases are very similar to problems from the course paper and/or problem sets).

Average score per problem

- Question 1: a) 59% b) 21%
- Question 2: a) 46% b) 67% c) 29% d) 23% e) 28%
- Question 3: a) 67% b) 51% c) 8%
- Question 4: a) 46% b) 40%
- Question 5: a) 35% b) 32%
- Question 6: a) 16% b) 10%
